

Cursor AI For Advanced Users

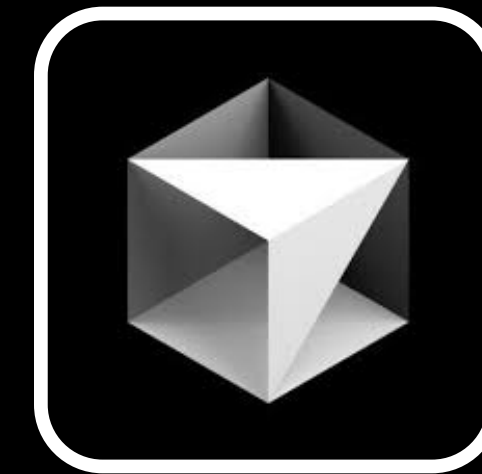

L-14

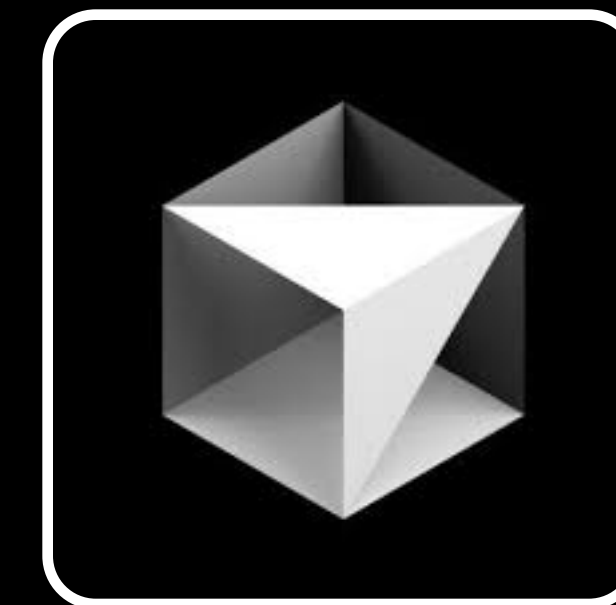

Documentation with Cursor
AI

Overview

- Documentation is the bridge between code and understanding
- It helps teams onboard faster, debug easier, and maintain cleaner systems
- But most developers delay it because it feels tedious
- With Cursor AI, documentation becomes automated, contextual and effortless

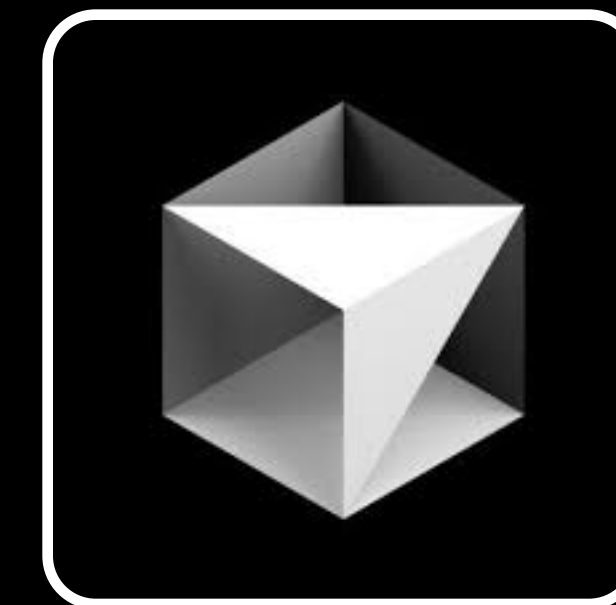

Demo (Code Explanation)

Prompt:

Act as an experienced Flask backend developer mentoring a junior teammate. Provide a concise, beginner friendly explanation of the selected python code

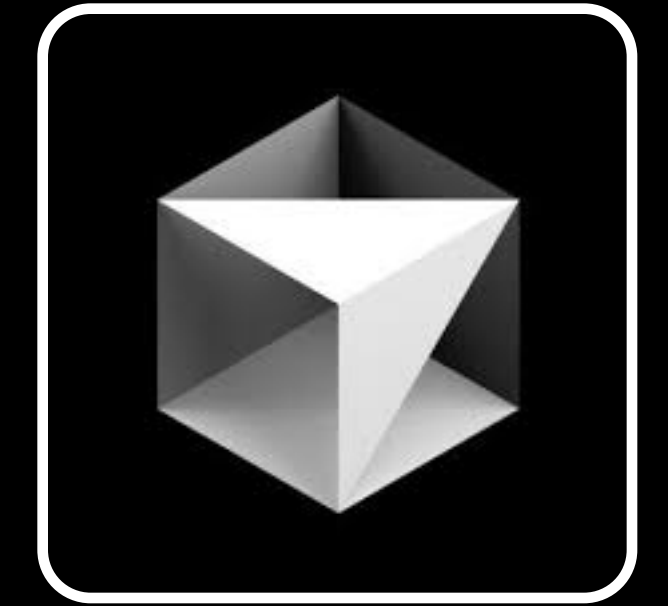

Demo - High-level & Inline comments

Prompt:

Generate a clear and well-structured docstring for the `@render_markdown` function. Please google-style formatting with sections for Args, returns and raises

Demo: App-level documentation

Prompt:

Act as a professional technical writer and draft a complete DOCUMENT.md for this project

Include the following sections:

- **A short project overview**
- **Key features and core functionality**
- **Tech stack (frameworks, libraries and tools used)**
- **A clear 'Getting Started' guide with steps to setup the environment, initialize the database, and run the app**
